Two-Piece T-Top Traffic Bollards

Looking for a traffic control bollard that doesn't back down when conditions get tough?

Barrier Group's **Two-Piece T-Top Bollards** are specifically engineered for *maximum stability and visibility* in high-speed traffic environments, exposed worksites, and wind-prone zones.

Built for the Elements, Designed for Safety

With a 6kg wide base, this T-Top Bollard stays firmly grounded—even when the wind picks up or traffic speeds increase. The two-piece design makes transport and installation a breeze, while the moulded polyethylene construction ensures durability in all weather conditions.

Compared to brittle or cumbersome alternatives, this traffic control bollard is lightweight yet rugged, making it perfect for contractors, councils, and event traffic management professionals who need gear that works as hard as they do.

Maximum Visibility When It Matters Most

Safety is all about being seen. That's why Barrier Group T-Top Bollards come in a high-visibility fluorescent orange that stands out in low-light conditions. Add in the standard reflective bands, and you have got 360-degree visibility, day or night, rain or shine.

Whether you're managing lane closures, delineating pedestrian paths, or securing construction perimeters, this traffic control bollard delivers clear, unmistakable guidance to road users.
