INDUSTRIAL RUBBER BUMPER

The industrial rubber bumper is suitable for industrial, warehouse, and commercial loading dock areas with a durable design that cushions and absorbs impacts to prevent damage for a lorry reversing too far. Protecting trailers and premises against vehicle impact, the D-shaped bumper is typically installed on the wall or loading platform.

Suitable for installation horizontally or vertically, you can also protect large areas by installing multiple loading dock bumpers end-to-end along the wall. Supplied with pre-drilled countersunk fixing holes designed for M12 bolts (not included), these are manufactured of heavy-duty, 100% recycled rubber which is UV resistant and corrosion-proof.

Commonly installed at supermarkets, depots and other large facilities where large trucks regularly deliver and pick up large shipments, the industrial rubber bumper prevents serious accidents that could not only damage vehicles and buildings but also injure people and damage shipments. Manufactured for Vigil Products, the black D-shaped bumper measures 1 metre in length and is 100mm x 100mm.

Product	Industrial Rubber Bumper
Product Code	VP-DBD1000
H x W x D	100x100x1000mm
Weight	9.24kg
Colour	Black
Material	Rubber
Carton Quantity	2
Carton Weight	18.72kg
Carton Dimensions	100x210x1000mm
